

Voice over the Internet Protocol (VoIP) is a method of carrying voice calls over an IP network by the digitization and packetization of the voice streams. These standards are utilized by IP telephony to create a telephony system that avoids PSTN high toll charges and facilitate a rapidly growing number of advanced cost-effective services and features. Although the IP telephony market has matured in the last few years beyond the reach of the traditional carrier, in order to protect their revenues, Service Providers must continue to expand their business models to support the efficient and economic integration and deployment of new services, bundled offerings, and technologies.

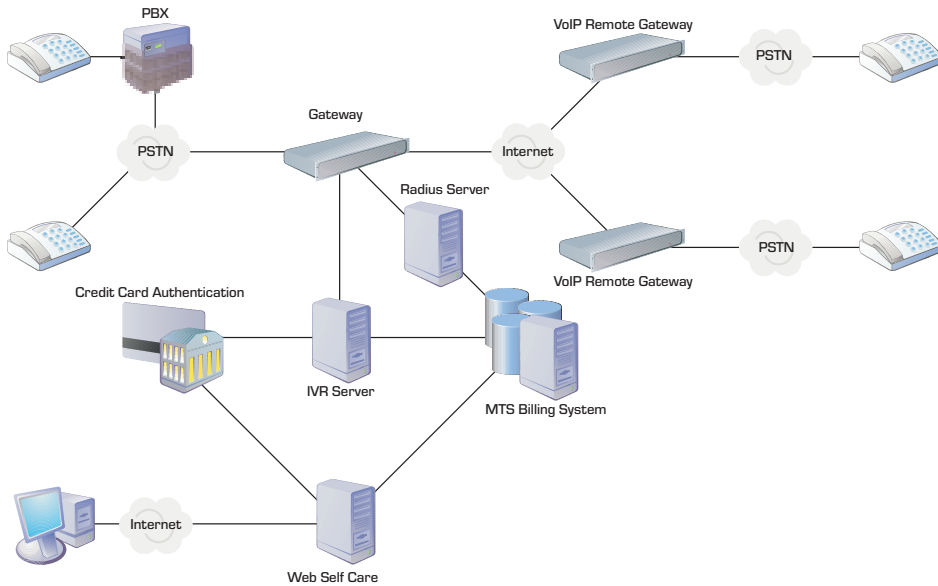

MTS' advanced billing solutions are designed to support the current and future needs of the highly profitable and growing IP telephony market. Our powerful, scalable, flexible billing platform delivers real-time VoIP as well as other customizable value based services. Moreover, the platform supports unlimited price structures, manages complex revenue sharing relationships, and provides comprehensive customer self-care via the Web or IVR.

VoIP Solution Highlights

- **Gateway protocols supported** – H.323, SIP and MGCP.
- **Real-time, Radius AAA authentication** – authentication and authorization of users in real-time for avoiding fraud and bad debt.
- **Prepaid, postpaid converged billing** – prepaid users can now enjoy a variety of pre-paid calling cards, or credit card prepayment. Post-paid payments can be made via credit cards, service accounts, and foreign currencies.
- **Flexible rating and service bundling** – MTS offers flexible rating supporting setup, recurring and usage-based rating. The platform's customized hierarchy structure supports unlimited pricing options allowing for new services and bundled offerings.
- **Customized reports** – a variety of financial reports and statements showing earnings, customer usage, and traffic analysis.
- **Partners' settlements and reconciliation** – precise auditing of settlement charges and costs between partners/providers.
- **Interactive customer management and provisioning** – real-time, immediate customer activation/registration for new users via web self-care or IVR. All accounts maintained can be updated for all services rendered. Additional on-line usage includes bill payment and on-line support.

Turning Billing Into a Strategic Advantage

VoIP Billing Solution

MTS Value-based Offering

MTS' billing solutions for operators and service providers consolidate information from the latest technologies to provide cost-effective multi-purpose billing solutions for Voice traffic, VoIP, WiFi, Internet usage and services, content, and gaming. These end-to-end customized billing solutions offer centralized revenue and user management, as well as real-time billing (including prepaid) using infinite business models. Scalable solutions are available for an established operator or if the service provider is just starting up. The flexible, modular open architecture allows for reduced time to market and a quick recovery of the investment. Coupled with these benefits are full featured customer self care services using the web or IVR.

About MTS

From its first product launch in 1985, MTS has delivered more than 60,000 installations in over 60 countries with multi-language support. The company maintains strong partnerships and strategic alliances, marketing its products through a network of subsidiaries, OEMs, and partners, including Avaya, Nortel, Damovo, Siemens, Philips, Ericsson, and Cisco.

Publicly traded since 1997 on the NASDAQ stock exchange [symbol: MTSL], MTS' scalable, flexible solutions empower its users with the right suite of tools to compete in today's dynamic global marketplace.
